***Freedom* Greenhouse** Price Sheet

We are pleased to introduce our *Freedom* line of backyard greenhouses. The innovative design results in a totally self-contained, self-tending greenhouse which requires no additional power supply to maintain temperature and watering systems. The easily maintained *Freedom* Greenhouse is perfect for the household that does not have a gardener home at all times, but still wants to have healthy and vigorous plants.

- Automatic ventilation controlled by a thermostat. One side of roof lifts off the frame drawing cooler air in, while hot air escapes through the roof peak.
- No external power supply needed. A 12v battery and solar charger power the roof opening mechanism and the automatic watering benches.
- Optional automatic watering benches eliminate the need for daily watering.
- Manufactured in Maine with eastern white cedar and triple-wall polycarbonate.
